

ensembl_cardiac_diseases_panel_20200715

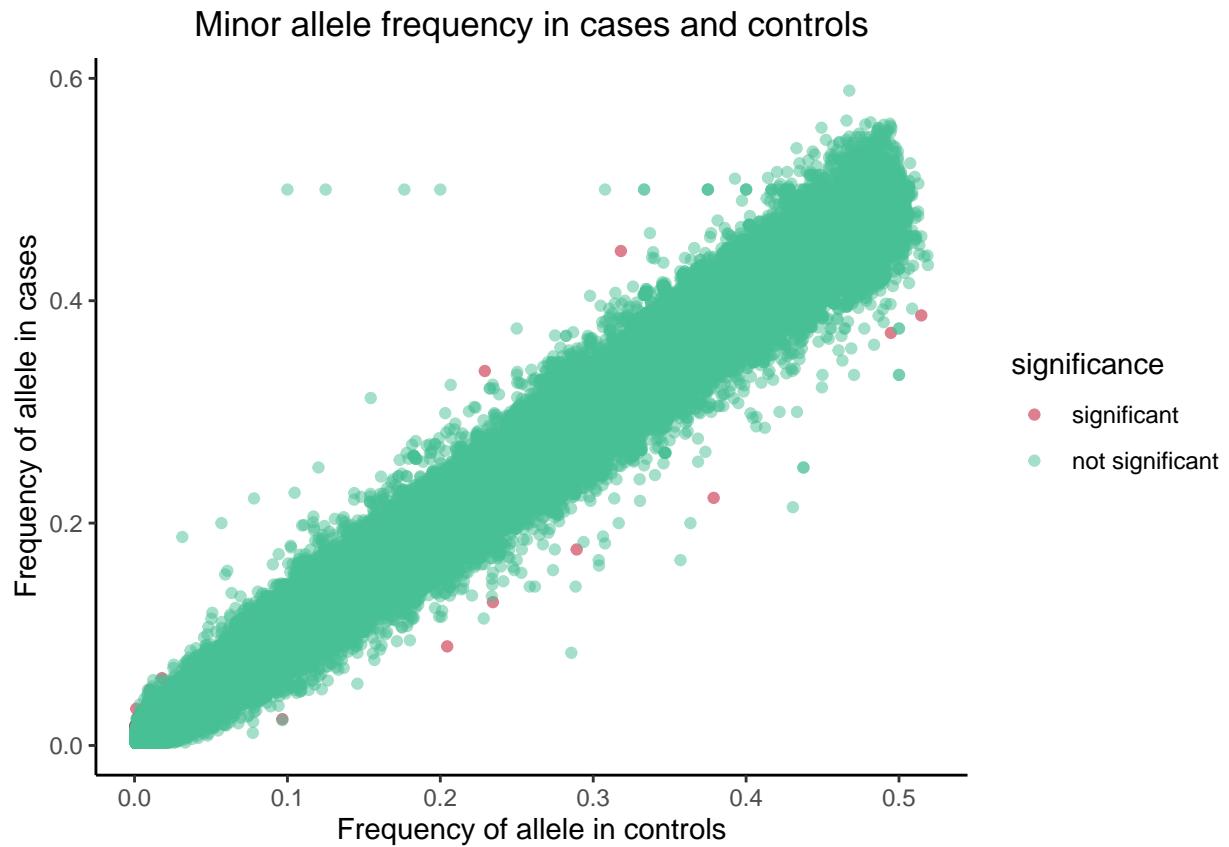

1. Cohort information

Control label include mild benign and resistant response to COVID-19 infection

2. Results

Association study was performed by comparison of allele counts in cases and controls with Chi-square test. Significance of variants is expressed in form of q-values which are FDR adjusted p-values.

Estimated odds ratio (OR) of minor allele occurrence

Red dashed line: OR = 1.0

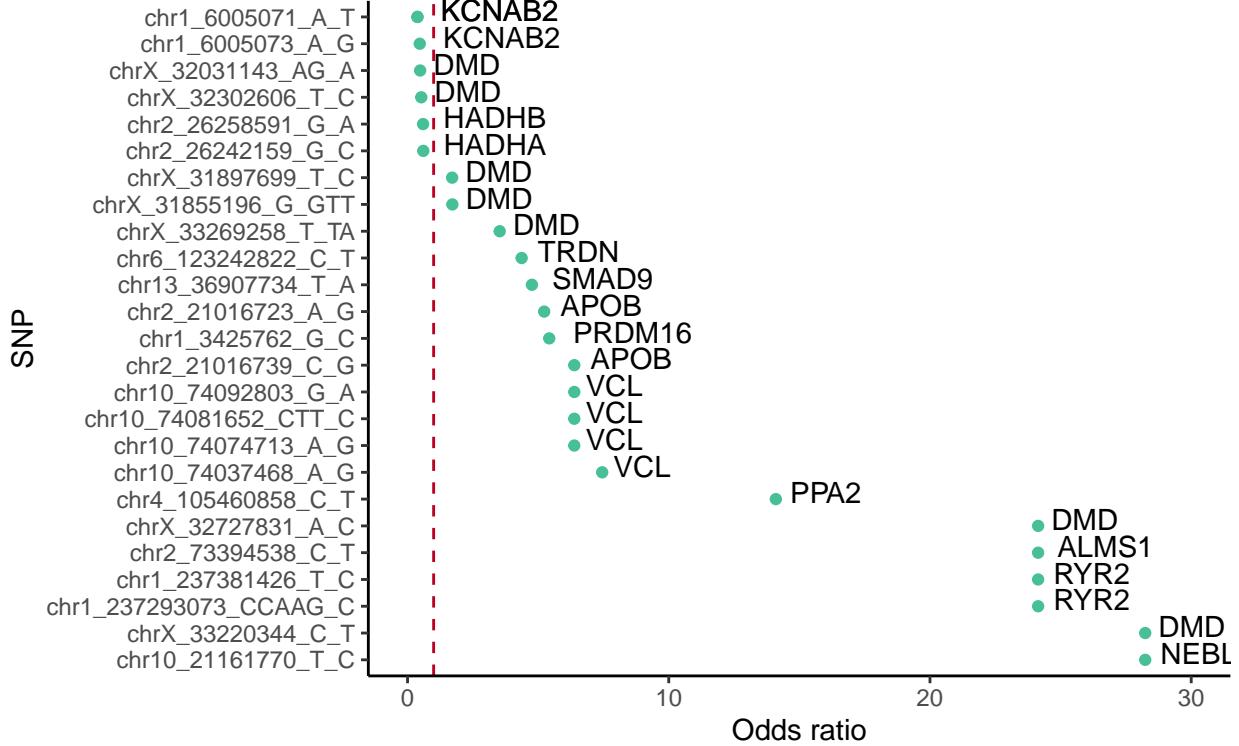

Table 1: Variants with q-value < 0.1
